Product Parameters

Material: Antimony-lead alloy, pure lead Weight: 390g per pair Applicable wire gauge: 16-120mm² Quality Certifications: CE, ROHS Product Features: Excellent conductivity, high hardness, corrosion-resistant

Product Advantages

This product is made of antimony-lead alloy. Antimony is a metal featuring high hardness, corrosion resistance and anti-oxidation properties, which is widely used for storage battery plates and battery terminals.

Formulated with 99% high-purity lead blended with 8% antimony, the product combines the premium properties of both metals: outstanding conductivity, high hardness, corrosion resistance and anti-oxidation performance.

It is mainly applicable for heavy-duty trucks, large construction vehicles, high-end SUVs, off-road vehicles, and military & police vehicles.
